

SAIL Safety Lens

AI safety platform for the steel industry

SafetyLens helps teams report near misses, analyse industrial safety observations with AI, identify PPE and unsafe-condition gaps from images, link findings to SOP/SMP controls, and track corrective actions to closure.

From observation to closure

Every report follows the same five steps, so nothing is lost between the shop floor and the review.

What you can do

AI Scan
[AI Scan tab](#)

Photograph a work area. AI flags likely hazards and PPE gaps, rates each on the 5×5 risk matrix, and shows its confidence and citation checks. Export the result as a PDF report.

Near Miss reporting
[Near Miss tab](#)

Describe what happened in English, Hindi or romanised Hindi. It is sorted into near miss, unsafe act or unsafe condition for the right follow-up.

SOP / SMP library
[SOP tab](#)

Scan your plant’s SOPs and SMPs once. Findings are then linked to the exact clause and control measure that applies.

Ask AI and Ask a Document
[Ask AI tab](#)

Ask a safety question and get an answer drawn from your own plant documents, with the source quoted so you can check it.

Investigations and actions
[Case details, Home](#)

Move each case through the status stages, assign an owner in the same plant, set target dates and see overdue items first in My assignments.

Reports and analytics
[Reports tab](#)

Dashboards by plant, severity and week, top hazards and days since LTI. Export to CSV or PDF for review meetings.

How to use it

- 1

Open the app
Go to [safetylens.in](#) in any browser, or install the Android app from the login screen.
- 2

Sign in
Use your P.no and password. On first sign-in you may be asked to set a new password.
- 3

Report
Tap AI Scan for a photo, or Near Miss to describe an event. Add location and details.
- 4

Check the AI
Accept, edit or delete each suggested finding. You decide what is filed.
- 5

Submit
Your supervisor validates the report and assigns corrective action.
- 6

Follow up
Track your cases on Home and in My assignments until they are closed.

Contractor on site?

Tap Contractor Access on the login screen. No account is needed to run an AI Scan or report a near miss.

For supervisors and managers

Validate reports, assign actions within your plant, track overdue items and spot repeat hazards in Reports.

AI advises. People decide.

Each AI finding is a suggestion with a confidence level. You review it before filing, and a person always makes the final call.
